PROFESSIONAL SUMMARY

Computer Science graduate with professional experience in full-stack web and mobile application development. Experienced in React Native, React.js, TypeScript, Node.js, Flutter, Laravel, and Python. Contributed to fintech, ERP, healthcare, AI, and e-commerce projects for startups and software companies. Passionate about building scalable, secure, and user-focused applications.

EXPERIENCE

Metro Financial Technologies S.C.
September 2026 -persent
Mobile Application Developer

- Working on mobile application development and maintenance, implementing user interfaces, integrating RESTful APIs, and improving application functionality and user experience.

Orbit Technology Solutions
Full Stack Developer
May 2026 – September 2026
Developing and maintaining web and mobile applications using React, React Native, Flutter, Nodejs,laravel and modern software development practices

Client Projects (Remote)
Zumbara – Electronics Selling Platform
Full Stack Developer

- Developed a cross-platform mobile application using React Native (Expo) and Built and maintained the administrative dashboard using React.js.

EagleLion System Technology
React Native Developer
June 2025 – May 2026
Built and integrated RESTful APIs for fintech applications, implemented secure authentication, transaction processing, role-based access control, and improved application performance.

Debbal Technologies
Software Developer-intern
March 30, 2024 – September 30, 2024
Contributed to an AI-based language translation model using TensorFlow and Python.

SKILLS

Technical Skills: HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js next.js, React Native, Tailwind CSS,MongoDB, MySQL,RESTful APIs ,Python,Django,laravel ,flutter
Version Control: Git, GitHub, Visual Studio Code, Figma, Chrome DevTools,
Soft Skills: Teamwork, Communication, Problem Solving, Time Management

PROJECTS

Snap & Shop (1st Place Hackathon Winner):

- Developed an AI-powered fashion recommendation platform that analyzes users' body shapes and provides personalized clothing recommendations. The application also enables users to upload images of clothing items and search for visually similar products using image recognition and computer vision technologies. By combining machine learning, image processing, and an intuitive user interface, the platform enhanced the online shopping experience through personalized recommendations and visual product discovery. This project was awarded 1st Place in a hackathon organized by Venture Media

StudyNest Library System:

- Developed a full-stack library management system using React, Node.js, React-native and MongoDB, Recognized by the University Library Director

Dashen Super App:

- Contributed to the development and enhancement of Dashen Bank's Super App, a comprehensive fintech mobile application providing digital banking and financial services. Developed and integrated mobile features using React Native, integrated RESTful APIs, implemented secure authentication and transaction workflows, and contributed to improving application performance, reliability, and user experience.

Dashen Merchant Application:

- The Dashen Merchant Application is a fintech mobile/web application designed to help merchants accept and manage digital payments.
- It is part of the digital financial ecosystem of Dashen Bank and supports businesses in processing transactions electronically instead of relying only on cash.

Choice Microfinance Application:

- Developed a digital microfinance platform for managing customer accounts and financial transactions.Implemented secure user authentication and role-based access control.Integrated backend APIs for account management, transaction processing, and reporting.Enhanced operational efficiency through digital financial service automation

Ethiopost Agent Application:

- The Ethiopost Agent Application is a digital financial service platform designed for agents to facilitate bill payments, cash-in, and cash-out transactions for customers.
- It acts as a bridge between the postal service, banks, and digital wallets to provide financial services in locations where banking access may be limited.

Azmera Trade (Hackathon Project):

- Participated in the development of an agricultural e-commerce and goods exchange platform aimed at empowering farmers to buy, sell, and exchange agricultural products. Contributed to building user-friendly interfaces, implementing marketplace functionalities, and supporting digital trade between farmers and customers. The platform was designed to improve market access, streamline product exchange, and promote digital transformation within the agricultural sector.

Youth for Health (Y4H) Platform:

- A digital health ecosystem comprising a Laravel API backend, a React admin dashboard, and a Flutter mobile application. interactive diagnostic assessments, real-time consulting chats using Firebase, and geolocation-based routing for healthcare clinics.

Adoye Platform:

- A community-driven social networking and empowerment ecosystem for girls and young women, consisting of a Flutter mobile application and a React admin dashboard. Built using Firebase (Auth, Firestore, Messaging, Storage) . it features discussion forums, curated e-learning courses, and an interactive GIS locator pointing to local support providers.

Finot ERP System:

- A multi-tenant, multi-branch Enterprise Resource Planning (ERP) platform built as a TypeScript monorepo (Turborepo) using React (Vite, Zustand, React Query) on the frontend and Node.js (Express, PostgreSQL, Prisma ORM) on the backend. Implemented real-time tracking (Socket.io), job queues (Bull/Redis), and comprehensive modules for HR, accounting, inventory, and fleet management.

Orbit Technology PLC ERP System:

- A business ERP platform built with React, TypeScript, Node.js, Express, and PostgreSQL, featuring HR, finance, inventory, procurement, and operations modules with REST APIs and role-based access control.

HMIS (Hospital Management Information System):

- A healthcare management platform where I developed backend modules and a mobile application using React Native, TypeScript, Node.js, Express, and PostgreSQL, supporting patient management, vital records, and role-based access.

Student Management System:

- A web-based platform for managing student records, registration, courses, grades, and academic information, built with React, TypeScript, Node.js, Express, and PostgreSQL.

Metro Super App (Telebirr-like Financial Super App)

- Contributed to the development of the Metro Super App on the mobile application side using React Native.
- Developed and improved mobile user interfaces and integrated RESTful APIs.
- Worked on financial service features, focusing on application functionality and user experience.

CERTIFICATES

- Certificate of Completion : Debbal Technologies
- Certificate of Appreciation : Rotaract Club (as Project Officer)
- Volunteer Certificate : Great Ethiopian Run
- Web Development Internship (1 month) :Prodigy InfoTech (Online) - React, Vite, Tailwind CSS)
- Recognition Certificate : University Library Director (for Capstone Project)
- Diploma in PC Training : EBS Computer Training Center (Certificate of Successful Completion)
- Certificate of Achievement: Achieved 1st Place in a Hackathon for developing Snap & Shop, organized by Venture Media.
- Certificate of Participation: Awarded for participating in a Hackathon organized by Venture Media.
- Certificate of Completion — Debbal Technology Solutions
